FOREWORD

This report is the fifth for a special series of field trials conducted by the Agriculture Canada Research Station in cooperation with Alberta Agriculture.

The objective is to provide relative information on seed production capability and general adaptability of named foreign cultivars of perennial grasses and legumes to assist the Canadian forage seed industry in the development of production contracts and seed export markets. Emphasis is on crops economically suitable for the region and which currently form part of Canada's forage seed export industry.

The following test sites were selected to represent the major agronomic soils of the region.

1. Beaverlodge A. Research Station (SE-1-72-10-W6th)

Soil type Esher-Hythe. Texture is medium fine, medium organic matter. Subsoil has poor permeability.

2. Beaverlodge B. Foster Farm (SE-25-71-10-W6th)

Near Beaverlodge, Alberta. Soil type Goose-Codner. High organic matter and very fertile. Orthic humic Gleysol. Clay loam to sandy loam.

3. Falher. Beaupre Farm (NW-1-78-21-W5th)

Near Falher, Alberta. Soil type Falher-Nampa. Fine textured with medium to low organic matter. Poor moisture penetration and percolation. Subject to crusting. Luvisol lacustrine clay loam to clay.

4. Fort Vermilion. Experimental Farm (NW-13-108-13-W5th)

Soil type Leith-Culp. Coarse textured with medium to low organic matter. Subsoil very permeable and calcareous.

5. High Level. Fedeyko Farm (NW-1-35-109-17-W5th)

Near High Level, Alberta. Soil type Davis-Tangent. Orthic and Dark Gray Luvisol. Medium textured with low to medium organic matter. Good permeability. Moderately calcareous lacustrine loam to silt loam.

Plots comprise four rows, 30.5 cm (1 foot) apart, 6.1 metres (20 feet) long, and replicated 4 times. Weeds are controlled by both mechanical and chemical means. Plots are fertilized annually in the autumn.

Seed and herbage (dry matter) yields are expressed both as actual production per hectare and as a percent of a designated (*) standard. The Least Significant Difference at the 5% level is also presented for each test. Winter survival is shown as a Hardiness Scale of 1 (poor) to 9 (best).

* Note: A technical error has been discovered in the perennial ryegrass data as reported in publication 81-168-1981. This data should be disregarded.

This publication will supplement "Forage Introductions Publication No. 70-16A-1979" which reports on all forages introduced since 1969.

INDEX

GRASSES

PAGE

Bromegrass (Bromus inermis Leys.)
